

## PREFACE TO THE EDITION

It is with great pride and anticipation that we present the latest issue of the **International Journal of Judicial Science Research Studies (IJJSRS)**. In an era where the legal landscape is constantly evolving in response to technological, societal, and environmental shifts, this issue aims to provide scholarly insights into some of the most pressing and complex legal questions of our time.

The articles in this volume reflect a rich tapestry of judicial scholarship, each offering nuanced perspectives and rigorous analyses. From the regulatory complexities of cryptocurrencies to the judicial safeguarding of minority rights, this issue highlights the dynamic interface between law, innovation, and justice. Notably, the article on the Legal Status of AI Entities raises foundational questions about personhood and accountability in a world increasingly mediated by artificial intelligence. In parallel, another contribution explores the fragile balance between digital innovation and the erosion of personal privacy—underscoring the urgent need for more adaptive and ethical legal frameworks.

This issue also honors the wisdom of long-standing legal traditions through a compelling exploration of Indigenous Laws in Environmental Conservation. By advocating for the integration of Indigenous knowledge systems into modern legal regimes, the article calls for a more inclusive and ecologically grounded approach to governance.

Each contribution in this volume not only deepens academic discourse but also has significant practical implications. As legal scholars and practitioners, we must continue to engage with these multifaceted issues with intellectual rigor, critical inquiry, and an unwavering commitment to justice.

We extend our deepest gratitude to the contributors, peer reviewers, and editorial board members for their dedication and scholarly excellence. We hope that this issue inspires further research and dialogue that advance the frontiers of judicial science and contribute meaningfully to the pursuit of a more just and informed legal order.

Dr. Dakshina Saraswathy  
Chief Editor

## CONTENTS

SL. NO	TITLE	AUTHOR	PAGE NO
1	Regulating Cryptocurrencies: Between Innovation and Risk Management -An Academic Analysis of Regulatory Approaches to Digital Assets	Sreeganesh U	22 - 27
